Summary

Experienced Full Stack Developer with over 7+ years of experience in designing, developing, and deploying scalable, user-centric web applications. Adept at building robust backend systems with a strong focus on performance, reliability, and maintainability. Skilled in end-to-end product development, and cross-functional collaboration. Recognized for driving technical initiatives, mentoring team members, and delivering high-impact solutions in fast-paced, agile environments.

Experience

Full Stack Developer

Jul' 21 - Oct'24

KonfigAI

- Engineered and deployed high-performance scalable cloud-native application using RESTful APIs, ensuring reliability and extensibility in distributed environments.
- Designed and developed reusable, domain-specific libraries, reducing development cycle time by 25% and enforcing consistent architectural patterns across the platform.
- Led the refactoring of client-side architecture by implementing Single Page Applications significantly improving user experience and performance.
- Collaborated with design and product teams to translate requirements into modular components, enhancing consistency and promoting code reusability across the codebase.
- Demonstrated strong ownership by independently ramping up on technologies such as Apache Kafka, AWS CloudWatch, and AWS DDB to diagnose and resolve complex production issues.
- Designed and developed scalable backend services and APIs for enterprise applications serving large-scale customer workflows.
- Implemented observability using AWS CloudWatch, enhancing real-time monitoring, reducing incident response time, and improving system uptime.
- Owned service reliability initiatives through canary deployments, proactive monitoring, and risk mitigation strategies, minimizing production impact and improving deployment confidence.
- Drove engineering excellence through detailed code reviews, mentorship, and enforcement of best practices for maintainability, scalability, and operational readiness.
- Contributed to scalable distributed systems by identifying performance bottlenecks, improving resiliency, and influencing architectural decisions aligned with long-term platform growth.

Skills : Java, Angular, JavaScript, TypeScript, AWS Aurora, DynamoDB, IAM Auth, S3, Apache Kafka, PostgreSQL, GIT.

Software Developer

Oct' 20 - Jul' 21

CitiBank

- Partnered directly with business stakeholders to investigate data discrepancies between staging and production environments during a large-scale Java and database migration project.
- Developed an automated Java framework to execute SQL validation queries and generate scheduled reports, reducing manual verification time by 70% and improving data accuracy.
- Worked closely with backend developers to integrate user-facing elements with server-side logic.
- Contributed to functional enhancements by collaborating with cross-functional teams to address platform limitations, optimize workflows, and deliver high-quality releases.
- Collaborate closely with cross-functional teams to facilitate changes, refine data interpretation logic, ensuring alignment with business objectives and data integrity standards.
- Developed and presented Tableau dashboards for visually impactful communication of insights to business owners.

Skills : Java, Spring, REST, MySQL, Tableau, Mockito, GIT, JUnit.

- Develop and maintain robust, scalable Angular applications with a focus on modular design and reusable components.
- Implement user interfaces and user experiences that are responsive, performant, and visually appealing.
- Collaborate with backend developers to integrate front-end components with backend services and APIs.
- Implement user authentication and authorization features using OAuth protocols, ensuring secure access to application resources.
- Utilize RxJS to manage asynchronous data streams, handle complex data transformations, and implement reactive UI components.
- Integrate data visualization libraries and charting tools to present data effectively within the application.
- Implement interceptors to add authentication tokens, handle authentication errors, and perform other pre-processing or post-processing of HTTP requests and responses.
- Write unit tests and end-to-end tests for Angular components and services to ensure code quality and reliability.
- Maintain and update existing test suites as the application evolves, refactoring tests as needed to keep pace with changes in requirements and implementation.

Skills : Angular, Typescript, RxJS, OAuth protocols, Jasmin, Karma.

- Worked in an Agile methodology environment including, Test Driven Development (TDD) with Continuous Integration/Delivery.
- Developed Graphical User Interfaces using HTML, CSS, bootstrap and for user interaction.
- Utilized Angular Material and custom components to create a responsive and user-friendly interface.
- Designed the navigation within the application using the Angular Router.
- Used Karma, Jasmine to do unit testing in most of the components.

Skills : Angular, Mockito, Postman.

- Requirements gathering, develop, implement, test, and deploy enterprise web applications using Spring, Angular, JavaScript, CSS, and HTML.
- Developed service classes, domain/DAOs and controllers using Java/J2EE technologies.
- Designed and developed Micro services, Rest using Spring Boot, Spring MVC, Spring Batch, Spring Integration based on the requirements.
- Used Angular 4 Reactive forms to implement complex forms and performed the validations using Form Builder.
- Designed and developed Web Services using Web Services Framework – Tomcat Servers.
- Building and unit testing using Maven, Junit, Mockito.
- Working on Continuous Integration using Jenkins/Hudson.

Skills : Java, Angular, JavaScript, CSS, HTML, Junit, Mockito, Agile Methodologies.

Education

Masters in CS: University of North Carolina, Charlotte.

Aug' 18 - Dec' 19

Bachelors in Electronics : Amrita Vishwa Vidyapeetham, Bangalore.

Aug' 12 - May' 16
